

Max 420

Connect regular telephones, fax machines and/or a PBX to the Max 420 to make low-cost calls to phones, fax machines and Net2Phone products all over the world.

With the Max 420 you can:

- Enable up to four users to simultaneously place low-cost calls using Voice over Internet Protocol (VoIP)
- Implement a low-cost calling solution that is easy to use
- Place calls over the Internet using your current network and regular telephones

Low-Cost Calling Solution

The Max 420 can benefit a variety of small businesses. Outbound telemarketing centers and corporate offices can save on their calls all over the world. Internet Cafés can profit by enabling their customers to place low-cost calls. Users will be calling from regular phones, so they won't have to learn a complicated new phone system.

Easy to Connect

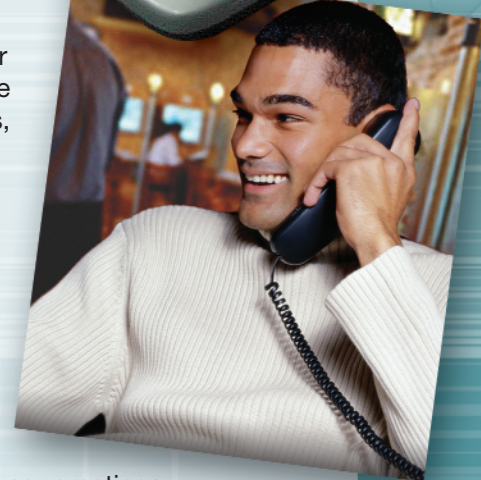

You can easily add the Max 420 to your existing network to route calls over the Internet. Simply connect the Max to a switch or router. Then, you have the flexibility of connecting the FXS ports on the Max to regular telephones, fax machines and/or integrating it with your PBX system

Port Type	Number	Connects To
FXS	4	<ul style="list-style-type: none">• Regular telephones, fax machines AND/OR• Analog trunk card of a PBX

Value-Added Features

The Max 420 also provides:

- IVR (Interactive Voice Response) functionality, enabling call connection and account balance announcements, password protection and various user greetings
- The ability to dial other extensions connected to the unit, which can be especially beneficial in an office environment
- Compatibility with the Max ABS (Automated Billing System) software, allowing you to set your own rates, generate detailed bills and view call detail records

Requirements

- Switch or router
- 17 Kbps per call
- Standard telephones, fax machines and/or a PBX system
- A PC or Mac (for initial configuration and management only)
