

Manage your Call Shop with Net2Phone's Free Web-Based Application

Net2Phone's Call Shop Management Center helps you operate an organized, profitable Call Shop

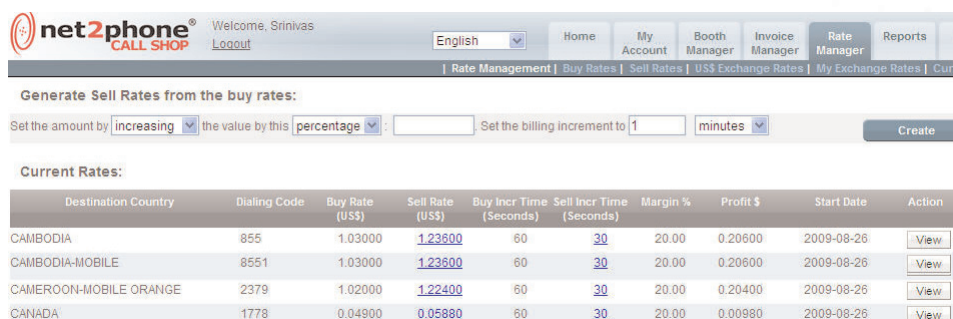

With Net2Phone's Call Shop Management Center, you can:

- Set sell rates, view buy rates and customize exchange rates
- Create invoices and view billing history
- Generate detailed revenue and profitability reports
- Manage booth activity

Rate Management

Our Rate Management application helps you manage profitability by enabling you to:

- View buy rates
- Set sell rates (select from various currencies)
- Change billing increments
- View and customize exchange rates

Invoice and Report Generation

Net2Phone's Call Shop Management Center allows you to generate both standard and customized invoices:

- Generate a standard invoice for calls made during one session in a single booth
- Create a custom invoice for unbilled calls made from multiple booths

In both cases, you have the ability to include additional services or items on the invoice.

And, you can generate multiple reports to help manage your business:

- The Call Destination Report provides information on calls made to all destinations over a particular time period
- The Reconciliation Report includes total revenue and cost/profit details

All reports can be exported and saved to Excel for future reference.

Booth Management

With the Booth Management functionality, you can:

- Manage up to twelve (12) calling booths
- View the call status within a booth
- Set limits for prepaid calls
- End a call
- Select a booth for invoice
