

## VoiceDirector Delivers the Benefits of VoIP to Corporations through a Wide Range of Applications

VoiceDirector is a flexible, SIP-based solution that can be easily implemented as a:

- **PBX Upgrade**
- **Replacement PBX**
- **Voice VPN (Virtual Private Network)**

In each case, VoiceDirector deployment is seamless and provides employees with a familiar calling experience. VoiceDirector software comes installed on a server that is placed at your headquarters location. Each location on the VoiceDirector network connects to the server through any one of our VoiceDirector devices that include single-user IP phones, Wi-Fi handsets and multi-port gateways that connect to a PBX or standard telephones.

### PBX Upgrade

With VoiceDirector, corporations can add functionality and capacity to an existing key phone system or TDM PBX. Besides lowering their communication costs and enhancing productivity, these companies can extend the life of their existing phone system.
